

Six-Dollar Natural Gas

Long-life natural gas producers, **San Juan Basin Royalty Trust, Cross Timbers Royalty Trust, Hugoton Royalty Trust, Dorchester Hugoton, Ltd. and Burlington Resources Inc.**, remain tightly clustered in offering attractive investment value (see table). Commitments to Gulf of Mexico oil producer, **Energy Partners Ltd.**, may be especially timely in this quiet period between the recent initial public offering and the announcement of third quarter financial results on or about November 28. Meanwhile, natural gas futures prices for the next two months broke new weekly closing ground above \$6 per million btu's, two and a half times actual spot prices a year ago. Oil and gas continue to surprise on the upside in price. We believe the underlying demand/supply balance for the commodities implies further investment gains for the stocks in our research coverage.

Even though the general level is moving up, commodity prices for the fourth quarter of 2001, the new period added to our moving average, are lower than for the fourth quarter of 2000, the period dropped from our next twelve months pattern. Those changes translate directly to revised estimates of cash flow or Ebitda, earnings before interest, tax, depletion and non-operating charges (see table).

A Weekly Analysis

November 20, 2000

Our computations for the next four quarters point to Dynamic Distribution Yields approaching 17% in cash (see table below). Latest monthly disclosures for SJT and HGT reflected more delay than anticipated in realizing higher commodity price. At the same time, higher than expected development spending is having a positive effect on volume for the two trusts.

Rank by Distributions	Price (\$/sh)

The rank by cash flow multiple reflects primarily our projections of future production and the costs of development. Reserve life hints at future production, but is not a complete indicator by itself (see table below).
